

Queen of Night meets the King of Day

E c l i p s e 2017 ( ) ( )

| We watched our sun saw her cry

| dripping down on you and aye

| she was ! full ! spot over shy -

// texture moon profound inwhy

o n e

we never-ever went there

another lie builds a hoax

to mans life more dismay

way from heaven ly hopes )

that 's why aye want to cry)

just pee\*king at the moon

please look on-me try.to.be

not acting like the baboons

my sun is sized - the same

and the full eclipse as blame

for shadow fly does n(o)t lie

we observed it all up in the sky

counted.measured.totality.crawl

presented touted to end in a stall

but they angle so rightly together

they just cover the sine up - exact

an cosine upon the ground found

a map in the truth of the fact :.

they cheered a-while as they ssang:!

as the lights went out and they came

butt treason -the Son of God reason

for geometry - the science is easing

fore the testing of you – is a shame

around it-is to show -off she goes

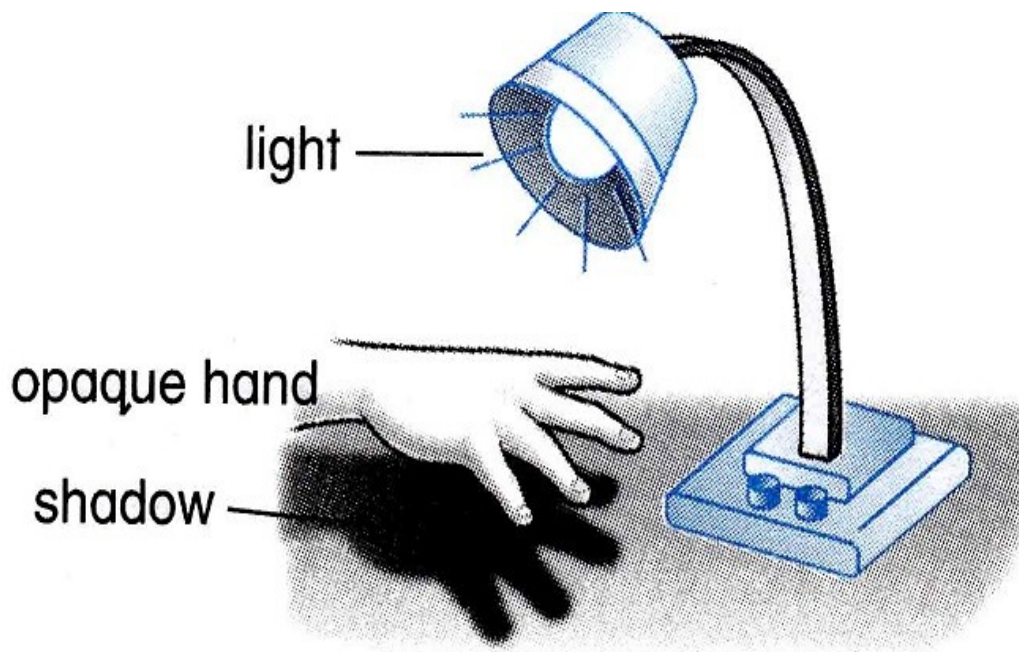

pathing a nightlight -darker impose

For my eyes cannot constantly see her  
() just as light comes and goes  
unless an edge - is around her to -  
-to let in the darkness expose -  
pleasing looking up at the moon  
her size n shape the path until

n o o n

it is not like the sun that shines  
the plasma is too cold thermo-clines  
to avoid the lies -the penumbra confused  
who buy up all all () what NASA's infused  
but my tension is is and it makes me groan  
to give up the stress not shake up our home  
if it makes a mess that is only the whiles  
but across the moon is seventy miles  
as in the shadow it completely shows  
triangle to here sun distance implodes  
miles are not millions or billions away  
only 3 thousand now we cut off dismay  
how to explain it so how can you know  
what I am writing is to tell you sum moe  
what is it - a shadow - how big can it be  
hold up your own hand on a light look and see  
the light that is cut off that has size - look degree  
see the shadow is no bigger but is not less than that see

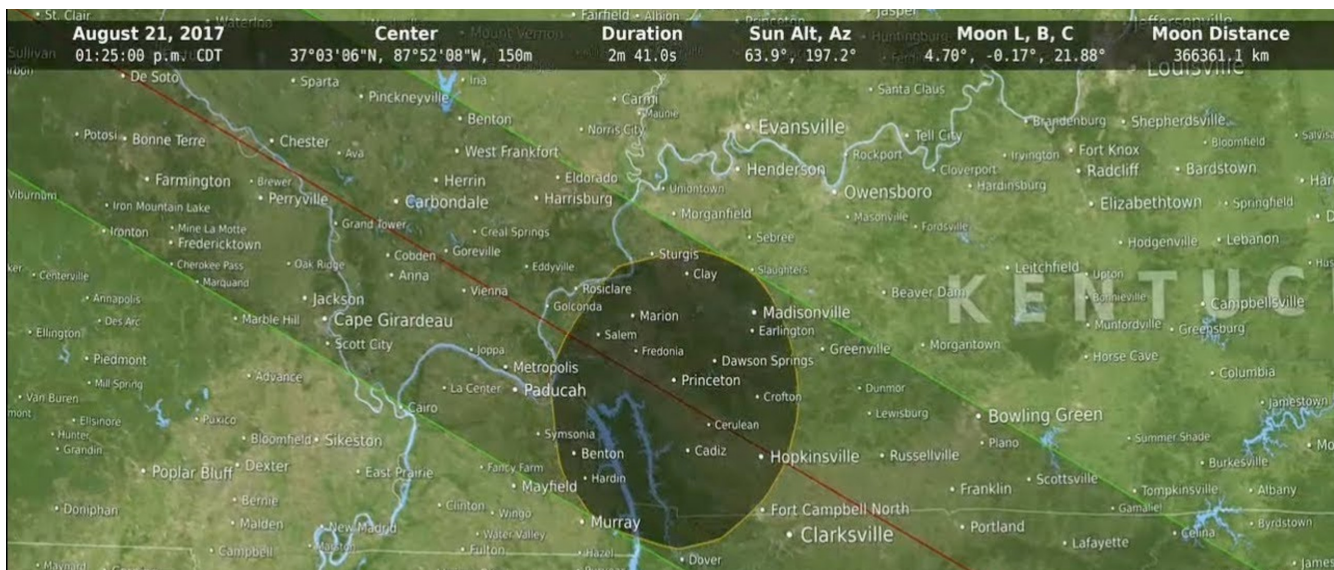

but that's the real size of your hand so you get it now you see  
how can the eclipse full shadow be a diameter of seventy across  
O you revealed the size of da "moon" the fact we now can emboss  
cutting across of the nation [] we think and the people saw  
living it all-in on libations no no one would catch it the flaw  
Lies you decide on the inside deceptions are running for free  
Satan hides lies to get us in the Sun the Moon or in Monkeys

Geometry is  
the learn-ed angle  
and the right triangle  
has already been made  
and it solves it perfectly  
clearly to me, like the moon  
on the sun makes a shade  
wish

I could wake-up and tell mother  
that the sun and moon is no further  
say it to be clear am confident, sincere  
they are only three thousand-nothing farther
